

## 6.2.10 Fruit shape

Reference varieties will vary between sites and sometimes between years. Insert the shape number from the outlines in Figure 1.

Fruit length max. diameter	Relative position of the maximum diameter					
	Towards the middle	Towards the eye	Towards the middle	Towards the eye	Towards the middle	Towards the eye
very short < 1.1						
short 1.1-1.25						
intermediate 1.26-1.50						
elongate 1.51-1.80						
very elongate >1.80						
Profile	concave		straight		convex
